Our Workflow

EasyUse LPC

What is a Product Owner?

The Product Owner is the sole person responsible for managing the Product Backlog.

This includes:

- Clearly expressing the customer needs in the product backlog items
- Ordering the backlog items for customer value to deliver the most valuable items first
- Ensuring that the product backlog is visible and transparent to the whole team
- Ensuring that the level of detail in the next backlog items is enough for the team to understand what needs to be done
